Nintendo DS Pico Quick Start

Custom Setup Guide for Rory

PICO-DRIVE EDITION

Welcome to Your DS Pico!

Hey Rory! This custom DS cartridge is powered by a Raspberry Pi Pico, designed to run your game backups smoothly directly on your original hardware. Follow this quick guide to get up and running in under a minute.

Getting Started (Step-by-Step)

1. Insert the Cartridge

Make sure your Nintendo DS / DS Lite / DSi is powered off. Insert the Pico cartridge into Slot-1 (the regular DS card slot) until it clicks securely into place.

2. Power On & Select Cartridge

Turn on your Nintendo DS system. On the main DS system menu, launch the cartridge just like a normal game card.

3. Wait for the File Browser

The system will quickly initialize and present you with the custom menu interface. From here, you can navigate your library of games.

Visual Overview

Pico DS Flashcard Boot Sequence

[Turn On DS] → [Select Slot-1] → [Pico Menu Loads] → [Pick Game]

Launching Your Games

All game files are stored cleanly inside the system folder structure. To launch any game, navigate to the following directory in the menu browser:

```
\Games\[.nds files here]
```

Use the **D-Pad** to highlight your chosen game from the list, and press **(A)** to launch it. The game will load directly into memory and start instantly.

Tips & Features

In-Game Saves

Save games work just like original cartridges! Your progress is written back directly so you never lose your data when powering off.

Resetting to Menu

If you want to switch games, simply turn off your Nintendo DS console and turn it back on to return to the Pico main menu.

Important Notes

Please refrain from removing the card while the console is powered on, as this can interrupt save files or corrupt software settings.

Need More Games or Technical Help?

Do not attempt to add or modify files manually. If you want any extra games added, ran into an issue, or need technical support, just get in touch with me!
